BlueSpice 3.1.1

BlueSpice 3.1.1 is a patch release. This is a stable release.

Changelog

- **FlaggedRevsConnector: align colors for highlighting draft in version history** (#5683)

FlaggedRevs used various colors to highlight draft revisions in the version history. This is now aligned to the BlueSpice color scheme.

- **Fix links to documentation** (#13552)

Some extensions in "Special:Version" pointed to outdated documentation. The links are now fixed.

- **Privacy: Change avatar after anonymisation** (#14216)

Avatar was not recreated after anonymisation and two parameters ($4 and $5) were not resolved in the anonymisation log. This is now working.

- **SocialEntities show up in watched pages** (#14681)

In the watched pages list and in SmartList, SocialEntity entries were listed. Now they are excluded, since all items must contain wikitext.

- **Indexing huge PDFs fails** (#15725)

In some cases, long documents were not indexed at all due to length limits. There is now a fallback: in this case, only the filename is indexed.

- **Ping request should start immediately on page-load** (#16467)

Long ping intervals caused delays and a "Someone is editing the page" message. Now the ping starts directly after page load which allows for more granularity of ping intervals and reduced load on the server.

- **Namespace select box in Special:CategoryTree is overlapped by header** (#16534)

On the page "Special:CategoryTree", some namespaces could not be selected. Now, the selection box correctly overlaps the header.

- **Privacy policy links should link to project namespace** (#16594)

Links from Privacy Center to privacy policy pages pointed to a non-standard page. Now, the default link points to the standard privacy policy page of the wiki.

- **VisualEditor table inspector UI is broken in BlueSpice free** (#16612)

The table inspector only showed icons, but no text and the icons were misaligned. The proper UI is now restored.

- **AND OR operators must work in search term** (#16613)

The keywords AND and OR were not evaluated in SearchCenter. This is now possible.

- **Wrong link for "Add attachment"** (#16629)

The link to the attachment page of an article was broken. It now works again.

- **Table formatting is lost on change between edit modes** (#16639)

Table color formatting was lost when switching between Visual and WikiText mode. Now, the color formatting is preserved.

- **HideTitle should also hide FlaggedRevs information** (#16738)

When using HideTitle on a page, the page revision status notification was still visible. Now, the entire title section gets disabled.

- **Use SSL link to bluespice.com in code documentation** (#16789)

Many URLs in the code documentation of the source code pointed to "http:" instead of "https:", but user interface links were already set to "https:". Now, a secure connection is suggested everywhere.

- **Subitems in header menu are displayed all the time** (#16808)

The second-level items of the header menu were expanded and could not be collapsed under certain circumstances. They are now collapsed and always collapsible.

- **ExtendedStatistics special pages ignores permission statistic-viewspecialpage** (#16951)

Statistics could be viewed by anyone with read rights. Now, the page requires a special right, which per default is assigned to the admin role.

- **Add attachments button out of line** (#16993)

In some cases, the "Add attachment" button was vertically misaligned. This is now fixed.

- **Remove dependency to PHP Tidy extension** (#16997)

The PHP extension 'tidy' is no longer maintained or bundled in some distributions (e.g., SLES). The dependency on that extension was removed and replaced by an onboard MediaWiki solution.

- **Smartlist fatal error in mode whatlinkshere when no target given** (#17008)

The smartlist tag was throwing an error when the attribute "target" was not set. Now, the attribute can be omitted safely.

- **Privacy: fix gender in anonymisation log** (#17015)

The log message of an anonymized user was always male gendered. The log message is now gender neutral.

- **Attachments can not be searched when there are external locations** (#17031)

Search indexing stopped overall when an external location could not be reached. Now, it just ignores that particular location.

- **Update repo file on WebDAV update** (#17069)

Repo files are now re-indexed when they are updated via WebDAV

- **Add article button is displayed in mobile view when left sidebar is open** (#17077)

The button had a wrong z-index, placing it above the menu. The z-index was fixed and now the button works correctly.

- **BlueSpiceAvatars needs 'editToken' replaced with 'csrfToken'** (T233546)
- **BlueSpiceExtendedStatistics needs 'editToken' replaced with 'csrfToken'** (T233547)
- **BlueSpiceFoundation needs 'editToken' replaced with 'csrfToken'** (T233548)
- **Checkup code passing $this by reference with a temporary variable** (T234118)
